The benefits of fibre cement

Fibre cement cladding is becoming more popular in both residential and commercial builds, because of its versatility in design. More than just looks, fibre cement has several performance attributes.

Fibre cement products are made from natural ingredients:

Cement   +   Water and Air   +   Radiata Pine   +   Sand

Material choice

With many different profiles, thicknesses, sizes, colour and textures available, including prefinished cladding, they can be mixed and matched to produce amazing and beautiful buildings.

Increased speed of construction and easy to install

Fibre cement products and systems can increase speed of construction through less trades being required (e.g. bricklayers and brick cleaners) and scaffold hire reduction. This can assist reaching lockup stage sooner.

Durable and low maintenance

Fibre cement products do not swell or warp, especially when compared to timber. They also hold colour very well so they don't need frequent repainting which can happen with some other products such as timber and render products. They are a non-combustible material, as well as being resistant to fire, impact and termites.

Maximise design footprint

With clever design, extra space can be added to the internal floor area, living and storage spaces from fibre cement construction. With products and systems that fix directly to the frame, this can reduce wasted space, and walls can be thinner than traditional construction methods.

Material	Wall thickness		Lost space on 15m x 15m slab (225m^2)
Double Brick	280mm	110mm Masonry 60mm Cavity 110mm Masonry	16.8m^2
Brick Veneer	250mm	10mm Plasterboard 90mm Timber Stud 90mm Insulation 40mm Cavity 110mm Masonry	15m^2
Territory	131mm	10mm Plasterboard 90mm Timber Stud 90mm Insulation 15mm Cavity 16mm Panel	7.9m^2

Cemintel. The face of design and innovation

Tapping into global design trends, Cemintel brings the best the world has to offer to the Australian market – providing the latest designs fused with innovative new approaches. Cemintel has a progressive approach to fibre cement built around a team of experts, including; technical support, engineers and building designers. For our clients, it means you're getting the best products paired with the best experience.

Backed by CSR

As part of CSR, the name behind Australia's most trusted building brands, Cemintel shares in the global focus across products, systems, solutions, research, development and sustainability. Our focus on technology and innovation ensures we are set up to deliver solutions for a better future.

Facade solutions under one roof

Our products deliver unmatched design versatility. Our prefinished and paint-on-site ranges seamlessly integrate with other CSR products like Hebel and PGH Bricks. Enjoy on-trend designs with a unified facade solution. Our commitment to sustainability ensures you receive cutting-edge solutions that are both innovative and environmentally friendly.

Global expertise, local support

Rely on our global expertise to meet your design needs. By combining local manufacturing with global sourcing, we stay ahead in architecture, design, and building technology. We also have the unique ability to provide local expertise and support for your project when you need it.

Compliant

Our panels are manufactured and sourced for the Australian climate (tested to AS/NZS 2908.2 and EN 12467). Our extensive technical resources are maintained by a team of experts, to ensure that our systems are up to date with the latest NCC requirements, so you can build with confidence.

Explore our range

Cemintel's versatility makes creating the looks your customers love easier than ever. With a range of products that are prefinished or ready to paint, you can simply decide on the look you want and make it your own. Plus, our trade essentials range of products are available to increase the durability of your build. From coastal Weatherboards to Territory Cladding that replicate the most popular finishes, there's a finish for you and your customer.

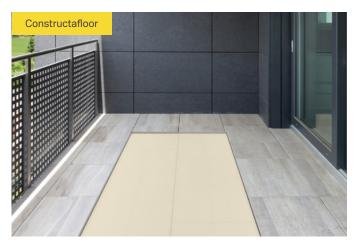

Barestone

Prefinished

Choose from three striking options: Surround for bold colour statements, Territory for brick and timber textures, and Barestone for raw concrete beauty. Cemintel's Prefinished Series merges functionality with aesthetics, offering a curated selection of products that need no additional treatment.

Weatherboard

Paint-on-site

Cemintel offers a versatile range of fibre cement cladding that can be painted on-site, allowing for endless customisation with popular exterior paint colours.

Constructafloor

Trade Essentials

Cemintel Trade Essentials are fibre cement products designed for common building applications such as internal linings, flooring underlays, eaves and more. These products are a staple in a builder's list of go-to because they are cost effective, durable and tough.

Cemintel Surround

Make a bold statement

Surround offers a refined selection of bold, architecturally inspired finishes, seamlessly blending striking colours with sophisticated design. Meticulously crafted to enhance structural form, it introduces depth and visual intrigue, elevating the aesthetic impact of any build.
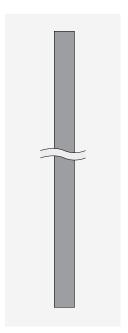

Whether pursuing a sleek, contemporary statement or a classic, timeless look, Cemintel's innovative solutions deliver both elegance and functionality - turning an architectural vision into an enduring masterpiece.

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays
Benefits of Surround

✓ Compatible with other Cemintel prefinished cladding systems including Territory and Barestone, integrates easily into mixed facade systems that use concrete, brick, or AAC such as Hebel.

✓ CodeMark Certified CM20199.

✓ Can be installed horizontally or vertically onto steel or timber stud framing, or masonry / concrete with Cemintel ExpressWall® top hat framing system.

✓ Can be cut to different shapes and sizes for dramatic design effect.

✓ Minimal ongoing maintenance and long-lasting protection against UV damage.

✓ Coloured rivets provide a more seamless aesthetic. Only one rivet type is used for both gliding and fixing points, simplifying panel installation.

✓ Concealed fixing system is possible for internal applications.

Note: For Non-Cyclonic installations, 0.75mm BMT top hats may be used, refer to D&I guide or contact DesignLink for further details.

Cemintel Barestone

The look of natural concrete

Barestone is a versatile, prefinished fibre cement panel that captures the raw beauty of concrete with factory-finished precision. Rooted in biophilic design, its natural textures foster a deeper connection to the environment, blending an organic aesthetic with durability for a refined architectural statement.

Barestone Original

Trade essentials
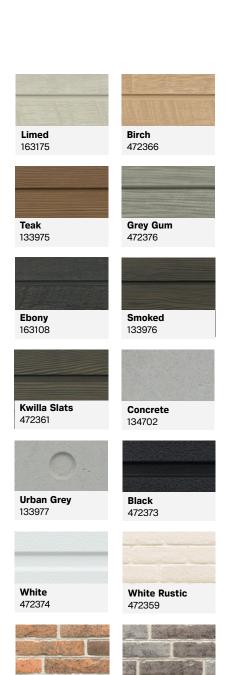

Cemintel Territory

Emulate your favourite finish
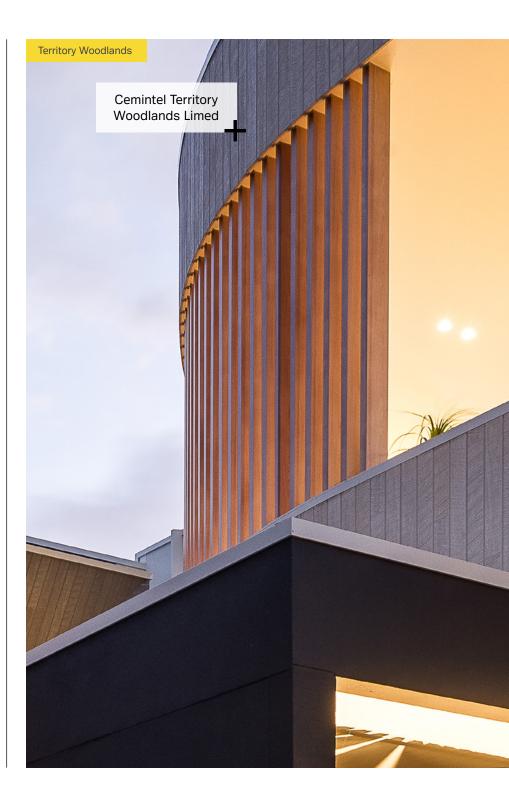

Territory is a premium fibre cement collection that replicates the natural beauty of concrete, timber, and brick - without the preservation processes these materials typically demand.

Offering high-quality durability with minimal maintenance, it withstands UV exposure and resists colour fade, making it perfectly suited to the Australian elements.

Product information
Territory cladding is a 16mm thick cement bond fibrous wood particle panel that is pressed with surface textures and finished with a high quality paint and UV coating. Territory panels are supported by a proprietary concealed fixing system that enables the panels to be installed on masonry, timber and steel frames, either horizontally or vertically, externally or internally.

Thickness (mm)	Width (mm)	Length (mm)	Weight per unit (kg)	Panels per pack
16	455	3030	24.7 to 30.1	2

Applications
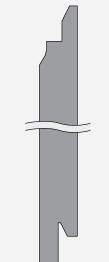

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Territory

✓ Compatible with other Cemintel prefinished cladding systems including Surround and Barestone, integrates easily into mixed facade systems that use concrete, brick, or AAC such as Hebel.

✓ CodeMark Certified CM30048.

✓ Tested to AS5113 achieving external wall reaction to fire performance classification.

✓ Resistant to Bushfire Attack Level 40 (BAL-40) for external walls with sarking. Tested accordance with AS1530.8.1.

✓ Minimal ongoing maintenance and long-lasting protection against UV damage and colour fade.

✓ Complete cladding system including preformed corners and colour-match sealants.

✓ Proprietary concealed fixing system provides a ventilated cavity for effective moisture management.

[*] The Territory cladding system achieves EW classification. This is in accordance with Australian Standard AS5113. It's achieved when cavity barriers, non-combustible components and non-combustible insulation are used.

Balmoral® Weatherboards

Balmoral Weatherboards offer a refined evolution of the classic timber weatherboard aesthetic, seamlessly blending timeless charm with the durability of advanced fibre cement technology. Featuring bold, deep shadow lines, it elevates both traditional and contemporary residential architecture, delivering a striking and sophisticated facade.

Balmoral Weatherboards
454428

Cemintel Balmoral Weatherboards

Product information

Balmoral Weatherboards have a 16mm thick profile providing sharp lines with a distinct shadow. Balmoral is pre-primed and ready to paint. It is lightly textured to give an even paint finish. The planks have a concealed fixing system and a tongue and groove profile so the boards easily slide together and provide a flat surface finish.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
16	454428	180	4200	15.96	75

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Balmoral Weatherboards

- ✓ 16mm thick profile provides strong, deep shadowlines.
- ✓ Lightly textured to help provide a more even finish.
- ✓ Pre-primed cladding means less painting on-site.
- ✓ Durable and resistant to termites and permanent water damage, so it won't rot.
- ✓ Gun-nailable for faster installation.
- ✓ Resistant up to Bushfire Attack Level 40 (BAL-40).

Scarborough® Weatherboards

Scarborough Weatherboards offer a refined elegance, seamlessly blending coastal charm with contemporary sophistication. Featuring crisp shadow lines from its 12mm thick profile, they enhance both classic and modern residential aesthetics, creating a warm and inviting facade.

Scarborough Weatherboards
89474

Cemintel Scarborough Weatherboards

Product information

Scarborough® has a concealed fixing system and square profile so the boards butt together and provide a flat surface finish. The pre-primed boards are also able to be cut at different lengths to minimise waste. The nail groove reduces the thickness to 8mm for ease of nailing and keeping accuracy.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack

Headland® Weatherboards

Headland Weatherboards embody classic Australian charm, featuring sharp edges and a distinctive linear recess that enhances traditional appeal. Equally suited for standalone weatherboard homes or as a striking feature wall in contemporary designs, they offer both timeless style and exceptional durability.

Headland Weatherboards
51294

Cemintel Headland Weatherboards

Product information

The weatherboard has a 25mm overlap which conceals fixings and they are gun nailable.
This profile is fixed in a ship-lapped manner and is simple to install.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
10	51294	170	4200	11.5	120

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Headland Weatherboards

- ✓ Ship-lap joint does not require filling.
- ✓ Concealed fixings for a cleaner aesthetic.
- ✓ Pre-primed cladding means less painting on-site.
- ✓ Durable and resistant to termites and permanent water damage, so it won't rot.
- ✓ Gun-nailable for faster installation.
- ✓ Resistant up to Bushfire Attack Level 40 (BAL-40) with sarking.

Aspect Cladding D&I Guides

Prefinished

Paint-on-site

Trade essentials

Product information

The 300mm wide panels have a 16mm wide groove, providing easy coverage for an attractive facade.

The overlapping joint means less fixings than traditional weatherboards with no visible face fixings, providing a clean and modern finish. Aspect Cladding is available with direct or cavity fixing options.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
12	130475	300 (276 mm effective coverage)	4200	23.94	60

Applications

External Cladding	Eaves	**Internal Linings**
Commercial Facades	Soffits	Ceilings
Apartment Facades	**Feature Walls**	Flooring & Underlays

Benefits of Aspect Cladding

✓ Shiplap joint creates weather-tight joint with water having to flow uphill to get behind the cladding.

✓ Aluminium internal and external corner accessories make installation easier.

✓ Pre-primed cladding means less painting on-site.

✓ Durable and resistant to termites and permanent water damage, so it won't rot.

✓ Gun-nailable for faster installation.

✓ Resistant up to Bushfire Attack Level 29 (BAL-29) for external walls with sarking.

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	**Soffits**	**Ceilings**
Apartment Facades	**Feature Walls**	Flooring & Underlays

Benefits of Edge Cladding

- ✓ Gun-nailable with shiplap vertical joints, so it's quick and easy to install.
- ✓ Multiple looks with one system – mix and match throughout your home.
- ✓ Can be installed horizontally or vertically for different looks.
- ✓ Can be installed internally and externally, and for eave and soffit applications.
- ✓ Pre-primed cladding means less painting on site.
- ✓ Resistant up to Bushfire Attack Level 29 (BAL-29) for external walls with sarking.
- ✓ Durable and resistant to termites and permanent water damage, so it won't rot.

Trade essentials

Product information

Texture Base Sheet is 7.5mm thick, with recessed edges for flush jointed external walls. When properly installed using the proprietary jointing, framing and coating system, Texture Base Sheet enable the creation of a seamless, weather resistant facades. They can be direct fixed or cavity fixed to create a ventilated and drained cavity system.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
7.5	10240	1200	2440	34.28	30
7.5	10241	1200	2725	38.26	30
7.5	10242	1200	3000	42.12	30

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Texture Base Sheet

✓ Coated with a blue pigmented sealer that uses Ceminseal® water block technology on the sheet face and edges.

✓ Recessed edges for flush jointing are 35mm long and 2mm deep and are on the long sides only.

✓ Suitable for Class 1 and 10 and 2 to 9 buildings.

✓ These are ideal for timber and steel framed construction.

✓ Resistant up to Bushfire Attack Level 29 (BAL-29) for external walls with sarking.

Mosaic

Mosaic cladding presents a geometric express-joint aesthetic, making it an ideal facade or feature wall for contemporary architecture. Mosaic cladding offers an accessible system, allowing homeowners and developers to achieve an architectural statement without the excessive price tag in both residential and commercial applications.

Mosaic
123280

Cemintel
Mosaic

Product information

Panels can be arranged to form a pattern effect either using block colour or a variety of tones using a painted finish. Panels can be cut as square or rectangle shape to provide a dramatic or edgy wall design for maximum effect.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
8	123280	1190	2990	44.86	30

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Mosaic Cladding

- ✓ Express joint installation using FC battens in lieu of metal top hats.
- ✓ Smooth finish panels for exterior paint or textured aggregate finishes.
- ✓ Can be cut to different shapes and sizes for dramatic design effect.
- ✓ Can be used internally and externally.
- ✓ Pre-primed cladding means less painting on site.
- ✓ Resistant up to Bushfire Attack Level 29 (BAL-29) for external walls with sarking.

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of ExpressPanel

- CodeMark Certified CM20196.
- Withstands high wind loads up to 7.0 kPa when used with the Cemintel Rigid Air Barrier.
- Install horizontally or vertically onto steel or timber stud framing or masonry / concrete using the ExpressWall Top Hat framing system.
- Panels can be factory or site painted.
- The high-quality panels are installed as a Pressure Equalised Ventilated Cavity System which delivers high weather performance.
- Resistant up to Bushfire Attack Level 40 (BAL-40) for external walls with sarking.
- Panels are factory sealed on both faces and all edges for increased weather resistance.

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Cladding Sheet

✓ A lightweight panel solution in a simple and traditional form.

✓ Simple cladding sheet allows for great design flexibility.

✓ Fast to install with traditional nail-on-frame methods.

✓ Resistant to permanent water damage.

✓ 4.5mm thick panels are suitable up to Bushfire Attack Level 29 (BAL-29) for eave linings.

✓ 6mm thick panels are suitable up to Bushfire Attack Level 40 (BAL-40) for eave linings, and Bushfire Attack Level 29 (BAL-29) for external walls with sarking.

Wallboard by Cemintel

Wallboard is the go-to premium internal lining solution, designed for wet and high-impact areas. Available in square-edged and recessed-edge formats, it features Cemintel's Ceminseal water block technology, which repels moisture and enhances paint adhesion. This ensures lasting durability and a flawless finish.

Wallboard
95850

Wallboard by Cemintel

Product information

The smooth finish of Wallboard is due to Cemintel's unique full steel template manufacturing process.
The smoother finish of the board means less work for the contractors for fixing and setting. At the same time,
it provides an excellent paintable surface.

Applications

External Cladding	Eaves	**Internal Linings**
Commercial Facades	Soffits	**Ceilings**
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Wallboard

✓ Ceminseal Wallboard can be fixed to either timber or steel frames.

✓ Ceminseal Wallboard features an embedded water block technology that prevents water from penetrating the sheet.

✓ High adhesive properties provide an excellent substrate for tiled finishes.

✓ Greater impact resistance than standard plasterboard.

Ceramic Tile Underlay

Ceramic Tile Underlay provides a precise, stable foundation for ceramic floor tiles. At just 6mm thick, it minimizes floor level variation, ensuring seamless transitions with adjacent surfaces. Ideal for bathrooms, laundries, and other wet areas, it offers long-lasting durability and a smooth, reliable base.

Ceramic Tile Underlay
454032

Ceramic Tile Underlay
by Cemintel

Product information

The Ceramic Tile Underlay has a smooth sanded finish. It's easily installed and is an economical choice when laying ceramic tiles over timber floors.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
6	454032	1200	1800	20.3	30

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	**Flooring & Underlays**

Benefits of Ceramic Tile Underlay

- A durable square edge fibre cement sheet.
- Resistant to permanent water damage.
- Resistant to termites.
- It's simple and quick to install using fibre cement underlay nails (or suitable gun-nails). Complete with pre-marked nail-pattern.

Ceramic Tile Underlay D&I Guides

Compressed Sheet

Compressed Sheets feature square edges and an unprimed surface, offering a cost-effective structural flooring solution. Designed for demanding environments, they provide a durable substrate for wet area flooring, decking, and tiled balconies. Their versatility allows for seamless integration with tiles and other floor coverings, ensuring both strength and longevity.

Compressed Sheet
10187

Product information

Compressed fibre cement (CFC) sheets are strong and versatile. The 15mm to 24mm thick sheets can be used for flooring while the thinner 6mm* to 12mm compressed sheets can be used as cladding, sound barriers and a variety of construction solutions.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack

* Ask your local Cemintel Representative for alternative sizes for larger projects.

Benefits of Compressed Sheet

✓ The strongest form of fibre cement. Providing a superior impact strength.

✓ Resistant to permanent water damage.

✓ A comprehensive range of multiple thicknesses, widths and lengths.

✓ Flooring resistant up to Bushfire Attack Level 40 (BAL-40).

Constructafloor®

Constructafloor® panels are lightweight, high-performance fibre cement flooring - designed for efficient installation with a gun-nailable tongue & groove joint system. Cemintel Constructafloor® is ideal for wet areas like bathrooms, ensuites, and laundries, or dry areas like living rooms and bedrooms. It also provides a durable foundation for tiled balconies. Reinforced with fibreglass mesh on the underside, these panels offer enhanced strength and stability for a range of applications.

Constructafloor®
115657 (Internal & External)

Constructafloor®
115659 (External)

Constructafloor
by Cemintel

+

Product information

The panels have a tongue and groove joint which keeps stability between joists and reduces the risk of membrane cracking. They do not contain any magnesium chloride (salt) which can lead to rusting of fittings and steel frames.

Rigid Air Barrier™

Cemintel's Rigid Air Barrier (RAB) is an external wall layer positioned behind the facade cladding cavity, enhancing weather resistance, air control, and moisture management throughout construction. Designed for commercial buildings, it ensures protection from pre-facade installation to final completion, contributing to a durable and efficient building.

Rigid Air Barrier
170076

Rigid Air Barrier
by Cemintel

Product information

The fibre cement Rigid Air Barrier is designed for use with Cemintel's Pressure Equalised Cladding Systems to produce effective weather-resistant facades. It also prevents the movement of air through the building envelope and enhances building comfort and efficiency.

Thickness (mm)	Product code	Width (mm)	Length (mm)	Weight per unit (kg)	Panel per pack
6	170076	1200	3000	36	30

Applications

External Cladding	Eaves	Internal Linings
Commercial Facades	Soffits	Ceilings
Apartment Facades	Feature Walls	Flooring & Underlays

Benefits of Rigid Air Barrier

✓ Helps produce effective weather-resistant facades.

✓ Works as a pre-cladding and protects against wind and rain allowing work inside the building to commence prior to cladding installation.

✓ Sealed on the face and edges using Ceminseal water block technology. It repels water, preventing water penetrating into the panel.

✓ Can be used where a non-combustible material is required by the NCC.

Cemintel and Hebel Junction Guide

The Cemintel and Hebel Junction Guide streamlines the process of achieving mixed facade solutions, bringing some of CSR's leading brands together under one roof.

This guide provides clear, best-practice expertise, ensuring seamless installation and durability where Cemintel and Hebel products meet. It simplifies the creation of on-trend facades with ease, delivering high-quality results through versatile, durable materials.

CSR digital tools

CSR's digital tools help you push the boundaries of what is possible in building. From selecting the right system for your project to understanding the thermal qualities of your walls, roof and floors, we empower confident decision-making throughout the construction journey.

CSR System Selector

Find the right building system for your project with CSR System Selector. Through a user-friendly interface, you'll have access to over 20,000 solutions. You can be assured of the highest level of quality, performance and compliance, and that you're covered from concept to warranty.

🖱 **Explore the CSR System Selector**

CSR Thermal Calculator

CSR Thermal Calculator generates thermal performance calculations for your wall, roof and floor systems, ensuring you meet your targets. You will have peace of mind that the calculations will be compliant to the relevant Australian Standards, and the outcome will be performance you can rely on.

Estimating service offer

Get an accurate list of materials from Cemintel and reduce the time it takes to place an order.

1

Send us your floor plan and tell us about your project and the products you want to use.

2

We will send you back a Quick Estimate or Take-off prepared by our professional estimators.

3

Ready to order? Send the completed order summary to your normal CSR contact.

To get started, email **cemintelestimating@csr.com.au**

Contact us to get started

CSR Connect

Streamline your order processes and save time chasing paperwork and status updates.

With CSR Connect you can:
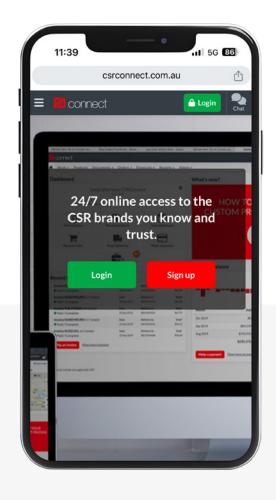

- View pricing
- Order products
- Tracking deliveries
- Download proof of delivery
- Access invoices and relevant docs
- Make payments
- Analyse with advanced reporting

connect

Sign up for CSR Connect, registration is free and it only takes 60 seconds to get started.

Cemintel Installer Training

Whether you are an installer or builder, we encourage you to learn about the benefits that Cemintel systems can bring to your next project.

We offer a monthly training session where you will learn:

- ✓ How to install Territory systems horizontally and vertically
- ✓ How to install Cemintel ExpressWall systems (Barestone, Surround, ExpressPanel)

Safety handling and general care.

Health, Safety and Personal Protection Equipment (PPE)

Your health and safety are the number one priority. It's important to understand how to work safely with Cemintel to minimise your risk, and prepare ahead when handling, lifting, and cutting Cemintel panels.

When cutting, drilling or grinding panels using power tools, always ensure the work area is properly ventilated.

An approved dust mask (AS 1715 and AS 1716) and safety glass (AS 1337) must be worn. Cemintel recommends that hearing protection also be worn. Refer to our Working Safely with Cemintel page for more information.

Working safely with Cemintel

Managing respirable crystalline silica

Respirable crystalline silica is dust in materials and products containing silica. It is released when mechanically treated (e.g. cutting, sawing, abrading such as rasping, scraping, grinding down, chasing or crushing). This dust is of concern due to its size as it gets caught deep in your lungs and can cause long term damage.

If you use the correct equipment, fibre cement is safe to use. Refer to the safety data sheet for your relevant project.

Safety Data Sheet

Cemintel safety requirements

Cut outdoors*	The ventilation outdoors is greater than that indoors, and therefore should reduce exposure.
Use on-tool dust extraction	Use on-tool dust extraction when using power tools to drill and cut Fibre Cement, with a vacuum that contains a HEPA M Class filter.
Correct equipment	Use a plunge saw with a specifically designed Fibre Cement blade.
Don't sweep, vacuum instead	When completing your work vacuum with a HEPA M Class filter, rather than a broom as sweeping creates more dust.
Use a respirator	Use a half face P1 or P2 respirator. It is essential that the respirator are Fit Tested and workers are cleanly shaven to obtain a good seal.

*Even though not recommended, indoor cutting can be completed when using an on-site cutting room with exhaust ventilation and a M class filter at a minimum, on-tool dust extraction with a vacuum with a HEPA M Class filter, a Full Face P2 respirator and conducting local occupational and static air monitoring to validate effectiveness of control measures.

Handling and general care

Storage

Panels must be stacked flat, clear of the ground and supported at 300mm maximum centres on a level platform. Panels must be kept dry, preferably stored inside the building. Panels must be dry prior to fixing, hence if it is necessary to store outside, the product must be protected from the weather.

Handling

Panels must be treated with care during handling so as to avoid damage to edges, ends and surface. Panels should be carried horizontally on edge by at least two people. With prefinished panels, consideration should be given to the activity of other tradespeople, in particular, a brick cleaner. It is highly recommended that installation of Cemintel prefinished panels should always be held off until the process of brick cleaning has been completed so as to avoid damage.

Cutting

Panels should be cut from the back using a power saw. Cemintel recommends using the Makita Plunge Saw Kit (1300kW) with guide rail and appropriate blade and vacuum extraction system. All exposed cut edges **must be sealed to prevent moisture absorption** using a suitable exterior sealer prior to installation.
